

# GFS as repository

## Supports hybrid setup

Get the best of both worlds by leveraging on the capabilities of AWS and on-premise servers at the same time.

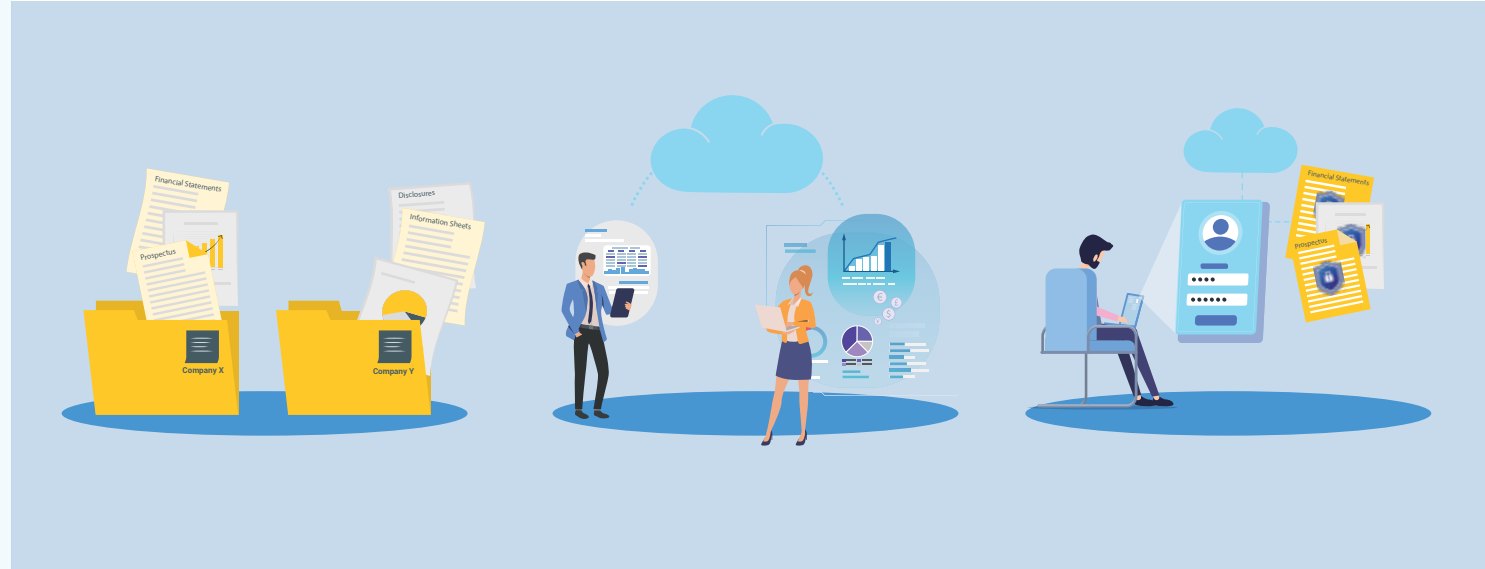

## Multi-level encryption with PKI

Secure your contents with encryption done at the file level or folder level, or encrypt everything if you choose to.

## Beyond the limits of a file repository

Accomplish more with a versatile machine readable database that links to every file in the GFS.

## Classified and organized documents

Effortlessly group related documents together for ease of retrieval. GFS lets you apply your enterprise's own classification schemes to derive the most efficient use of your documents.

## Encrypted and secured access

GFS allows you to safeguard confidential business information by encrypting data of your documents.

## Unparalleled document reachability

Access your documents whenever you need to, wherever you are. Ensure smooth collaboration with clients and partners who want frequent and immediate updates on their information.
