

## Delivery of electronic documents

Conventionally, an email is sufficient for sending out electronic documents from one person to another person. However, there is no way to check for the recipient to check if the sender is the person who he claims to be.

Another issue that arises is that there is no way to automatically check if the documents sent by the person concerned are complete as required by the recipient.

## Fret no more. Introducing SuperEasy.

SuperEasy is a service developed by SVI for the secure delivery of electronic documents.

Compared to email-based document delivery, SuperEasy has 3 major advantages:

1

Know Your Customer (KYC) process for both document sender and receiver.

For example, when applied to the HRD hiring process, the HR personnel and the applicant are both subjected to the KYC process. FIDO and VideoID can be used to onboard the sender and receiver, identifying that they are really who they claim to be.

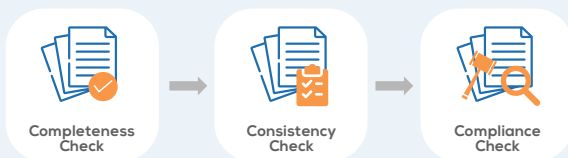

3

Access and retrieval of documents in a cloud-based digital repository

The applicant can easily check the status of his application and that his documents are received by the HR.

2

Verification of completeness, consistency, and compliance using CrossCheck

During the applicant's onboarding, the HR personnel can check if the submitted documents are complete, the contained information are consistent, and the submissions are compliant to the HR rules.

Corresponding alerts can be relayed to the applicant so he can address deficiencies to his submissions.
