- Utilizes formal test and software quality assurance (SQA) methodologies
- Creates, extends, updates, and maintains functional details in regression test plans.
- Sets up test environments, including configuration of servers, hardware and software on host operating systems to run simulations and testing.
- Responsible for coordinating an SQA project test when testing is performed across several related projects.
- Analyzes and reports significant bugs under the appropriate project/product.
- Tracks all bugs and project issues.

Requirements

- BS degree in Computer Science, Computer Engineering or any related course
- Minimum of 4 years of software-related work including development and testing
- Excellent understanding of testing processes and experience in testing methodology.
- Has experience in setting up and configuring complex test and/or production environments.
- Ability to understand use cases and craft detailed test scenarios, test cases, test plans
- Experience testing applications running in Android, iOS, Linux or Windows operating systems.
- Scripting knowledge & experience (e.g. Python, SQL)
- Basic networking knowledge & experience
- Troubleshooting skills
- Basic understanding of virtual machines, databases, networking.
- Must be willing to work in Ortigas, Pasig City

Responsibilities

- Automation testing experience
- Experience in testing under Agile development is an advantage.
- Experience in using selenium is a plus
