WE'RE HIRING!

SVI
Your Global Solutions Partner

NETWORK ADMINISTRATOR

Responsibilities

❖ Evaluate, plan and recommend network solutions that meet business requirements
❖ Setup, implement and maintain routers, firewalls, VPN appliances, switches, and other network devices
❖ Setup network monitoring systems to proactively determine the network performance such as availability, utilization, throughput, faults, etc. and perform remedial measures as needed
❖ Conduct regular review of logs to determine any indication of network errors, security threats /vulnerabilities, performance degradation and other related problems and resolve accordingly
❖ Conduct regular testing of network for weaknesses and vulnerabilities and apply remediation or permanent resolutions to mitigate network security issues
❖ Provide technical assistance to user community and project teams
❖ Conduct troubleshooting and apply corrective measures according to the planned resolutions
❖ Design, develop and implement network backup and disaster recovery procedures
❖ Install, implement and maintain security measures to protect against network intrusions and malicious attacks
❖ Develop and maintain all network related documentations relating to network configuration, security policies, operating procedures and vendor support records and others
❖ Implement network architecture using the best IT practices

Qualifications

❖ Candidate must be a Bachelor's/College Degree of Computer Engineering, Computer Science, Electronics and Communications Engineering or equivalent
❖ At least 3 year(s) working experience in supporting enterprise network and security infrastructure with a strong understanding of TCP/IP and DNS, routing, VLANs, packet filtering, port security, and traffic engineering.
❖ Must have experience in installing, trouble shooting and maintaining
o SDWAN, Cisco, Fortinet, Mikrotik, Juniper or PFsense
o Switching: VLAN, VTP, STP, Etherchannel
o Routing: BGP, OSPF, EIGRP
o VPN: IPSEC, SSL
❖ CISSP, CCNA or CCNP is an advantage
❖ Experience with 24x7 network and system monitoring suites
❖ Experience in managing vendors (ISP, hardware vendors)

❖ Experience in the following is a definite plus:
o Virtualization technology (VMWARE, HYPER V, Open stack)
o Linux Operating System, iptables, squid
o InfoSEC (PCI-DSS, NIST, SOX)
o Asterisk, Issabel, FreePBX
❖ Experience in enterprise network monitoring tools, Nagios, Orion, Manage Engine, PRTG
❖ Good problem solving and decision-making capabilities
❖ Good verbal and written English communication skills
❖ Ability to articulate technical concepts and/or procedures
❖ Must be self-motivated, committed, and willing to learn
❖ Amenable to work in shifting schedule, if required
